+ New sub-item								
Logout	Logout Functionality	Despe, Reymond Ch	Not started		June 8, 2024	High		Create Account
Routing	Create routing for Auth pages	Reanne Jalipa	In progress	June 3, 2024	June 6, 2024	Medium		Login

For Sprint 2, we have now accomplished the front-end side of the User Authentication pages (Landing Page, Sign Up Page, and Sign In Page) yet, there are still some minor changes on the design. For Backend, we tested the services for AWS, one of it is the RDS, which will serve as our database for deployment. Another one is the EC2, which plays a role on the server side of the application. We created an API for sign-up and sign-in page (to be implemented on Sunday). Validators are also added for the authentication pages. We created SQL Queries, Tables for the database part of the application. Test Matrix are already implemented to do initial testing for each sprint. Routing are being studied, to be implemented on Sunday.

## **Sprint Retrospective**

### **What went well:**

- The front-end side of the Authentication Page are already done.
- The back-end side of the Authentication Page are done too.
- Database is being established.

### **What could be improved:**

- Due to the last incident (We are not able to submit the progress report and sprint retrospective), we should be wary of deadlines and how to meet them on time.
- 

### **What needs to be done:**

- Routing should be implemented already by next sprint.
- Homepage should be established.
- We should start developing the questionnaires' part.
- Display Result and Email.
